SUMMARY

Java backend developer skilled in Spring Boot, Spring Security, REST APIs, MySQL, Kafka and Redis. Builds scalable backend systems using microservices architecture, distributed-systems concepts and SOLID design principles.

TECHNICAL SKILLS

Languages Java, JavaScript, SQL, HTML, CSS

Frameworks Spring Boot, Spring Security (JWT), Spring Data JPA, Hibernate

Messaging & Caching Apache Kafka, RabbitMQ, Redis

Databases MySQL, MongoDB

Tools & Platforms Git, GitHub, Docker, Maven, Postman, Swagger/OpenAPI, IntelliJ IDEA

PROFESSIONAL EXPERIENCE

Infosys Springboard

Feb 2026 – Apr 2026

Spring Boot Backend Developer Intern · Team of 4

- Built 15 RESTful APIs for an Online Medication & Prescription Tracker using Spring Data JPA and MySQL
- Implemented JWT authentication and automated prescription validation logic at the service layer
- Conducted peer code reviews in an Agile team, resolving integration issues and maintaining code quality

PROJECTS

IPL Live Cricket Dashboard

Spring Boot · Kafka · Redis · MySQL · MongoDB

- Designed a high-level architecture capable of handling large-scale concurrent traffic using Kafka event streaming and Redis caching
- Built a modular event-driven system of ingestion, processing, caching, persistence, API and monitoring modules
- Implemented dual Kafka consumers — one persisting to MySQL, another updating the Redis cache for consistency

FinTrack

Spring Boot · Spring Security · JWT · MySQL

- Built a secure backend with 3-tier RBAC (Admin, Analyst, Viewer) enforcing data isolation and permission boundaries
- Implemented stateless JWT authentication with custom security filter chains securing all REST endpoints
- Applied SOLID principles and constructor-based dependency injection to improve maintainability and testability

Swagruha Foods E-Commerce Backend

Spring Boot · JWT · MySQL

- Built a production-grade e-commerce backend for a family food business supporting product catalog, user management and orders
- Designed the order processing workflow and role-based access control for customer and admin operations
- Designed a scalable database schema and documented REST APIs with OpenAPI/Swagger for seamless integration

Distributed Key-Value Store using Raft

Spring Boot · Java · Raft Consensus

- Currently developing a distributed key-value store implementing the Raft consensus algorithm for data consistency
- Implementing quorum-based agreement with fault tolerance: $(N/2)+1$ nodes sufficient for data validity
- Building a multi-node cluster surviving node crashes with automatic leader re-election, preventing a single point of failure

EDUCATION

B.Tech, Computer Science

Expected 2027

Sri Vasavi Engineering College, Andhra Pradesh · Final year
